The Restaurant Industry Is Unhappy

Owners Are Unhappy

- Restaurant costs are rising & profits are shrinking
- It is expensive and difficult to hire and retain staff – cost of turnover \$5K/employee/year

Employees Are Unhappy

- Numerous tasks make it impossible to focus on the highest value work

Guests Are Unhappy

- Generic and poor customer service make for unpleasant experiences

1

Percy

Owners Are Happy

- Labor costs decrease 30%, driving more profit
- Employees who never miss a shift, are always on time, expertly trained, and drive higher average ticket sales

2

Employees Are Happy

- Focus on the highest value work with happier and more committed co-workers

3

Guests Are Happy

- The best customer service and experience
- Machine learning drives customized product recommendations to grow average customer spend by 15-20%

Restaurant Staffing Is Hard And Getting Worse

Problems

- **Employee turnover is worse than any industry**
 - On average, restaurant employees quit after 2 months: **27x** more frequently than the average non-restaurant employee
-

- **Because of turnover, the sunk cost of training has no ROI**
 - The cost to train a new employee before they even begin serving customers is **\$5,000**
 - This translates to over **\$35,000** of annual turnover costs for **one position**
-

- **Available jobs that cannot be filled in the restaurant industry are at an all time high**
 - Annually, there are **900k+** open roles that cannot be filled in the restaurant industry
-

- **Customer service suffers during a labor crisis**
- Customer-centric companies are 60% more profitable than companies that don't focus on customers
- High turnover creates inconsistent experiences, and negatively impacts customer experience

Percy Saves The Restaurant Industry

1

People

- Expertly trained cashiers with no turnover
 - On time and available for every shift
 - Customized training to fit each brand
-

2

Profit

- No up-front capital investment or incremental costs to a restaurant P&L
 - Machine learning driven upselling and superior guest experience increases average ticket sales by 15-20%
 - Immediately save 30% on gross wage spend
-

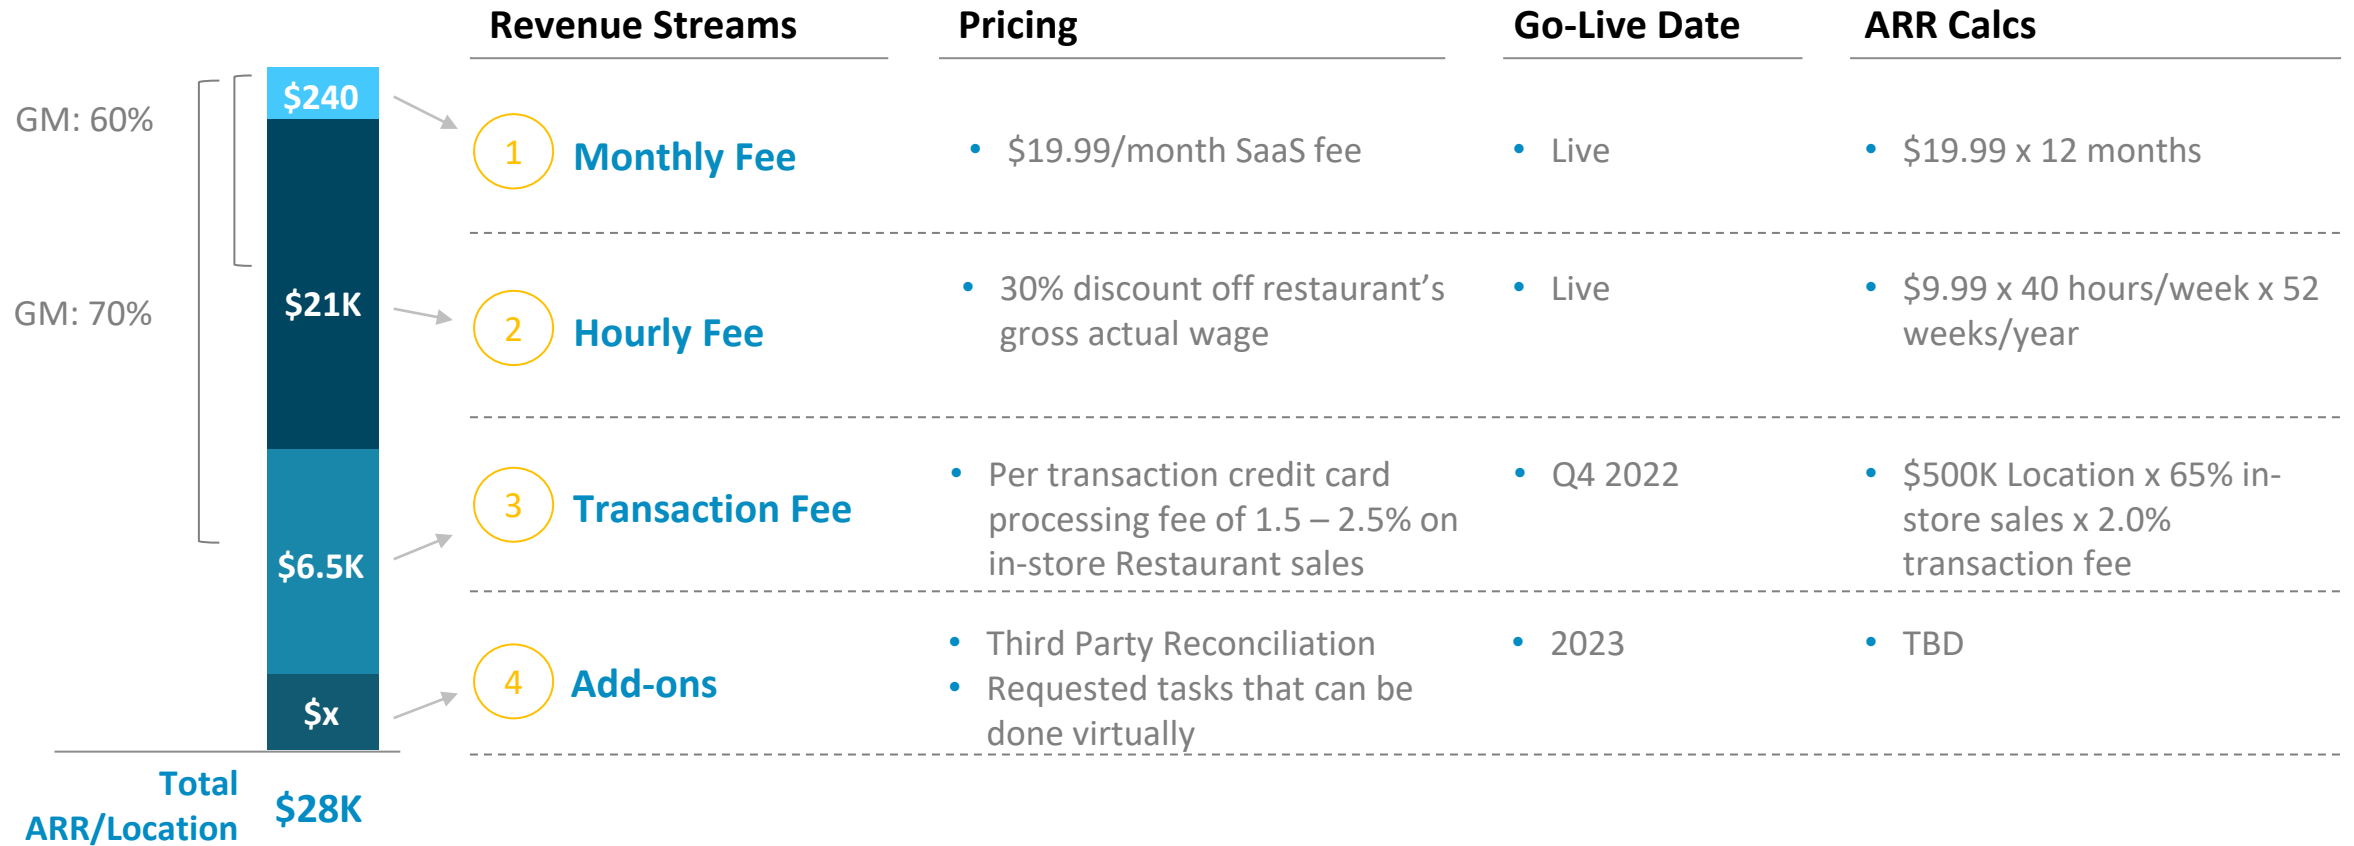

3

Guest Experience

- Personalized customer experience based on demographics.
- We are capturing thousands of data points of which we can then use machine learning and facial recognition to create more personalized experiences based on demographics.
- High order accuracy and menu education

Percy Revenue Model

TAM

\$63B

If every restaurant in the developed world hired Percy

SAM

\$21B

If every North American restaurant hired Percy

SOM

\$1B

If 5% of North American restaurants hired Percy

50K Restaurants

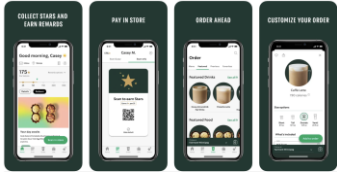

× 40 hours/week

× \$9.99/hour

× 52 weeks

= \$1B SOM

Competitive Landscape

Category	Example	Commentary
Kiosks		- Limited customer experience, high up-front capital costs \$5000+ in-store human support required Percy focuses on guest service with no up-front capital costs and built-in human assistance
Apps		65% of all restaurant transactions (including fast food) happen in-store Percy serves 65% of in-store traffic
Bite Ninja	 Bite Ninja	- Y-combinator backed virtual drive thru employee, 30% more expensive than Percy, drive thru only, and up-front capital costs. Percy has a cheaper hourly rate, works in both drive thru and in-person, and has no up-front capital costs.
Artificial Intelligence	 Converse Now	- A Voice AI platform which fulfills phone and drive thru orders. Less than half of the orders can be fulfilled without a human troubleshooting the process. AI alone cannot keep up with the demands of the restaurant space. Percy is built for a machine learning enabled future, with built in human support capability.
Non-tech Solutions		- Cut operating hours, raise worker wages, increase menu prices Percy is expertly trained, always on time, never sick, and never quits. Machine Learning driven upselling increases average revenue by 15-20%, and restaurants immediately save 30% on gross wage spend

- VP, HR Freshii
- CEO, Blackbird Labs
- Built and runs a 50+ person dev team in Ukraine
- Finance Leader Walmart
- Finance Leader Freshii
- Sales Leader Clearco
- Sales Leader Lane

Commentary

This team has built a 200M+ revenue business. We have deep roots and expertise in all functions of the restaurant industry. We are capable of building the perfect solution because we've lived and breathed the problem. In addition to our executive team, we have 20+ (and growing!) Percy's located in Bolivia, Nicaragua, and Pakistan.

Freshii Proof of Concept

Quantitative

1

People

- +100K Percy interactions since launch
- 20% increase in usage per location since live date

2

Profit

- ~\$22k annual savings per location
- Increase sales by 15-20%

3

Guest Experience

- Upselling guests on relevant menu items
- Friendly service

Qualitative Business Owner Feedback

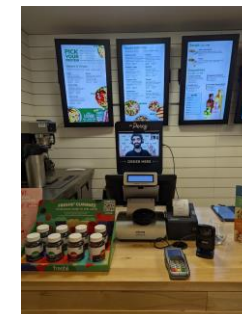

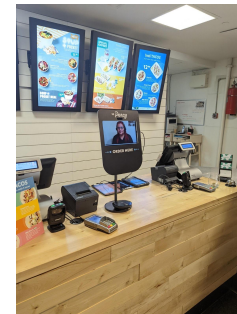

"I trust Percy to handle driving sales so that my team members can focus on in-store tasks"

"Our team members love Percy - they are a part of our huddles, they are in constant communication and share common goals"

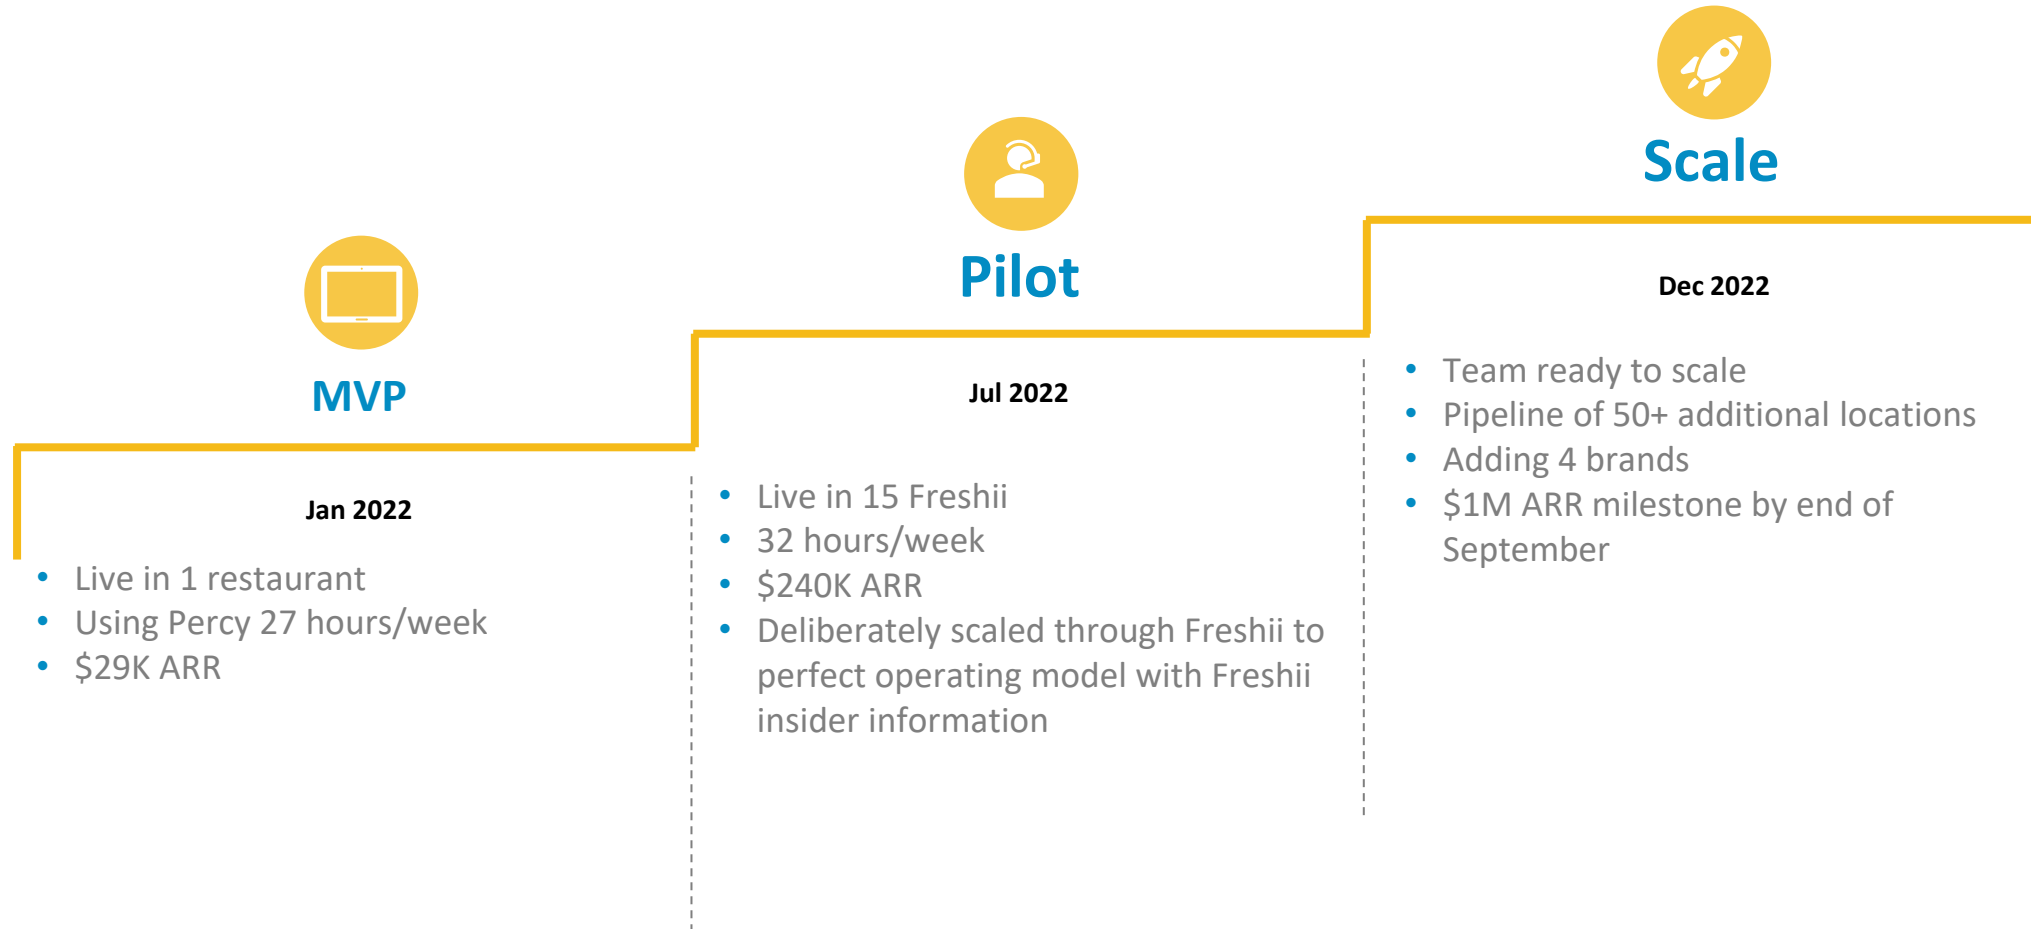

"Percy has given me the confidence that I can get through this challenging restaurant environment"

"Twice this week, we wouldn't be able to open without Percy"

"My guests love that they are talking to someone! For them, it feels like they're talking to someone working from home"

Where We're Headed

Development Roadmap

Proof of Concept

Jan – Jun 2022

- **Remote Desktop** software to control clients Point of Sale
- **Zoom** meetings to connect restaurant and cashier

Standalone software

Jun - Nov 2022

- **POS Agnostic software** for remote order taking
- **Cashier centric user interface** putting new cashiers at par with experienced industry cashiers
- **Restaurant Android app** for seamless interaction with cashiers

New Features

Nov 2022 – May 2023

- **Next in line** que allowing cashiers to service multiple restaurants at the same time
- **Low cost Kiosk** and virtual cashier 2 in 1 model
- **Drive thru** capability
- Custom Avatar ordering to elevate guest experience

Machine Learning

Jan – Dec 2023

- Leverage 100,000 + interactions to train machine learning models
- **Specific upsell** based on customers
- **Dynamic greetings**, conversation tips on cashier UI
